Mamimum Marks:4 Marks

Data Flow Diagram

learning Strategies - (a) Simple DL model based on a single data source and predicting a single outcome, (b) Multi-task learning model based on a single data source and predicting two outcomes, (c) Multi-modal learning model based on two data sources for predicting a single outcome, (d) Transfer learning schema, in which the parameters of a source model trained on one dataset are copied to a target model for further fine-tuning purposes on another dataset, and (e) Active learning schema, where a user is queried to label new data based on a prioritization score.
